**No Limits To Space.
 No Limits To Design**

A never before seen event has happened in the tile industry wherein two giants SOL and Sanford have joined hands for a complete makeover of the ceramic industry. Both these companies have a sole ambition to redo the types of designs and quality floating in the market and present something which is completely new in its design sense and quality standards.

Emcer e-slab the leading manufacturer of e-slabs in India proved there existence in the World Ceramic Industry by achieving heights and reaching to the top in span of two years. Emcer proved that being a Quality and Research oriented organization is the key to success, which Emcer maintained from day one of the production of their e-slabs.

With there Mantra of success, Emcer managed to fill the void between design and quality by fulfilling the both criterias and created a benchmark in the world. With there highly qualified design and research team Emcer managed to achieve the peak by mapping every minute details of the products.

At Emcer -

" We believe in making the world more beautiful with best Quality Products and Innovative Designs".

**Management
 Emcer**

Everlasting Design Enormous Extra Thin & Light Eco Friendly Eternal Feel

**éSLAB is the true testimony
of modern architecture.**

It is a new architectural concept that goes beyond a single slab: it allows designers to reinvent design criteria, giving them the maximum freedom and a minimum of limitations.

it is a material that combines the established, classical characteristics with new high performance qualities: strength, lightweight, flexibility and durability.

ESLAB allow architects to design a space ranging from simple flooring or coverings for large and small surfaces to object-based applications and furnishing accessories to enhance the world we live in. with eSLAB we have created a world where big is beautiful, with visually expanded spaces, fewer design and endless possibilities. on the one hand the eSLAB drastically reduces the amount of interruptions to the design unit, on the other the range of sub-multiples ensures great versatility for every and all needs.

tecnología/
La technologie

Techno- logy

Man may not have survived if fire was not discovered. Mankind may have stagnated if wheel was not invented. Humans would still have been nomadic, if agriculture was not found. These may have been rudimentary technologies, but their impact in transforming humanity has been phenomenal.

The fact that technology helps humanity transform, evolve and grow is not lost on us. Hence, we always value technology and encourage innovation. In fact, technology is our man Friday and innovation is our middle name.

We are proud of the non-conventional technology that we use along with the latest innovation in digital glazing that helps us produce the never-before seen slabs that are absolutely flat.

The image features a wooden table with a thick, solid top and a matching leg. The wood has a warm, natural finish with visible grain and knots. The table is set against a solid grey background. Thin, light-grey geometric lines, including a diagonal and a horizontal line, intersect to form a triangular shape behind the table. The text '800X 1600MM' and 'EMATT' is printed in white on the grey background.

ESLAB INSTALLATION INSTRUCTION

Follow the instruction for better and smooth execution of Emcer eSlab Products.

01

Apply cement mortar bedding on the surface and spread the entire mortar evenly. For flattened surface approximately 9mm thick cement mortar bedding is preferred.

02

The drying time of cement mortar bedding is approximately 48 hours, as it will exceed the contraction and expansion of feature of cement.

03

Apply approximately 10mm thick tile fixing adhesive on the prepared cement bed, spread the same by using metal comb (12mm) to the entire surface (Refer the image). This feature will allow to be fixed without any air pocket after installation.

The Same Method has to followed for applying the tile fixing adhesive on the back of the slab for 10mm, while holding the slab on its length side. Then, the adhesive has to be combed in the same way as done on the floor.

04 ESLAB HANDLING

eSlab can be properly handled and lifted by Vacuum cups. Vacuum cups are usually used to life glasses, it can be fixed on the surface of polished tile, to lift it to the exact area of the fixing. (May not very effective for satin and matt surfaces.)

Once the slab is laid, the same has to be hammered by soft wooden base hammer to ensure proper laying and fixing.

05 ESLAB CUTTING AND HANDLING

Use diamond tools which are generally use to cut glasses, for cutting any surface of eSlab. First, a line has to be drawn on the surface pressing the tool considerably to ensure a deep cut mark line and this can be used till the slab is cut deep to the level of 1 to 2mm and then can be cut with a proper cutting tool for cutting the 9mm thick body of the slab. Cutting systems are also available with companies manufacturing such systems.

06 ESLAB CUTTING AND DRILLING METHODS

NOTE: Colour Shown are as accurate as the limitations of the printing process will allow. Prospective Customer are advised to inspect a sample of tiles before ordering, every effort has been made to ensure the accuracy of the information given. However, the Company research the right to change the specifications Without prior notice. Sometimes variations in shade or size being inherent to ceramic industry may occur. Before fixing, we advice you to follow the fixing Instruction on the cartons of the tiles as no responsibility can be accepted by the once the tiles have been fixed.
